

## Reflection :-

- A reflection is a transformation that produces a mirror image of an object.
- The mirror image for a two-dimensional reflection is generated relative to an axis of reflection by rotating the object  $180^\circ$  about reflection axis.
- Reflection gives image based on position of axis of reflection. Transformation matrix for few positions are discussed here.

Reflection about  $x$ -axis

This transformation keeps  $x$  values ~~are~~ same but flips  $y$  value of co-ordinate positions.

$$\begin{bmatrix} 1 & 0 & 0 \\ 0 & -1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

Reflection about y-axis.

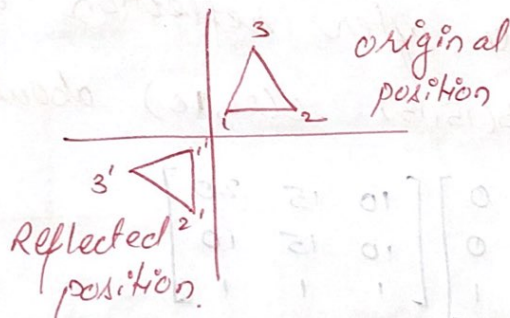

This transformation keeps y values same but flips x values of coordinate positions.

$$\begin{bmatrix} -1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

$$\begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ 1 & 0 & 0 \end{bmatrix}$$

Reflection about origin.

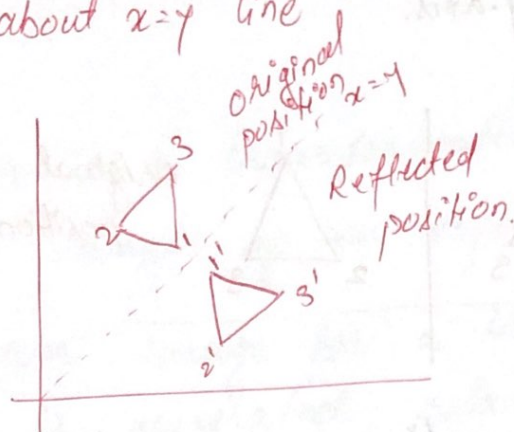

This transformation flips x & y, both values of co-ordinate positions.

$$\begin{bmatrix} -1 & 0 & 0 \\ 0 & -1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

$$\begin{bmatrix} 0 & 0 & 1 \\ 0 & 1 & 0 \\ 1 & 0 & 0 \end{bmatrix} = \begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ 1 & 0 & 0 \end{bmatrix}$$

Reflection about  $x=y$  line

This transformation interchange  $x$  &  $y$  value of co-ordinate positions.

$$\begin{bmatrix} 0 & 1 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

Example:-

Q. Find the co-ordinate after reflection of the triangle  $A(10,10)$   $B(15,15)$   $C(20,20)$  about  $x$ -axis.

$$P' = \begin{bmatrix} 1 & 0 & 0 \\ 0 & -1 & 0 \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} 10 & 15 & 20 \\ 10 & 15 & 10 \\ 1 & 1 & 1 \end{bmatrix}$$

$$= \begin{bmatrix} 10 & 15 & 20 \\ -10 & -15 & -10 \\ 1 & 1 & 1 \end{bmatrix}$$

Final co-ordinate after reflection are

$$A' (10, -10)$$

$$B' (15, -15)$$

$$C' (20, -10)$$
